"The Works of a Person That Builds Begin Immediately to Decay, While Those of Him Who Plants Begin Directly to Improve."

"All The World Loves An Orchard."

There Is Lots of Fun Gathering Fruits From Your Own Orchard.

We take pleasure in presenting this new edition of our catalogue to our friends and patrons, hoping that they will accept our grateful thanks for the generous patronage and confidence they have bestowed upon us in the past. It shall be our aim in the future by strict attention to business and honest dealings in all transactions to merit a continuation of same. Therefore we trust we may continue to receive our share of your orders of Nursery stock assuring you we will endeavor to handle same to the best of our ability and with absolute satisfaction to you. Our business is run on a simple, common sense cash basis. We pay cash for all labor, fertilizers, tools, seeds, etc., in fact everything used, therefore we are able to grow trees cheaper than it would be otherwise.

While we cater especially to the HOME ORCHARDIST yet we are in a position to make quotations on trees in large lots. As this goes to press we have orders already booked for several thousand already peach trees for commercial plantings.

WHY YOU SHOULD HAVE A HOME ORCHARD.

Recreation and diversion for the man or woman can be obtained in no better or more profitable way than in the planting and intelligently caring for a HOME ORCHARD of ones favorite varieties of peach, apple, pear, satsuma, blueberry, pecan, etc.

Truly there is no other diversion which gives one more pleasure, a greater thrill than growing fruits and

contented with their lot in life.

Especially does growing a HOME ORCHARD furnish the ideal diversion, both mental and physical, for the professional and business man and woman whose work is of necessity confining. Practically everyone either owns or expects to own, sooner or later a HOME. Many people own houses or places. It is true, no matter how much money is put in a house and grounds unless it has that full homey appearance that fruit trees lend, namely "the horn of plenty," it is incomplete. There is a bareness, a coolness, but the home with one or more grape vines running over trellis or pergola, a few satsuma trees, pecan, pear, peach, apple, plums, etc., is thoroughly inviting and attractive. Did you ever see a house and lot but that needed one or more of those provided they haven't them already? Our most learned dietitians are unanimous in stating one of the greatest

nuts in one's own "Garden of Eden." In this day of man, practically everything is artificial or imitation but to set trees, watch them grow, bloom, fruit, then to gather and eat the fruit directly from the tree would make any man or woman healthier, happier and more

needs of diet is the addition of plenty of fresh, raw fruit in order to obtain certain important vitamins. Fruits bought from the market, as a rule, are gathered before ripe and lack the natural flavor that fresh fruit allowed to ripen on tree has. Not only does one enjoy eating and giving to friends fruits of their labor but to have plenty of different fruits to can for winter use is a great help.

"We eat all the fruit at our house we can, and what we can't, we can."

OUR TREES

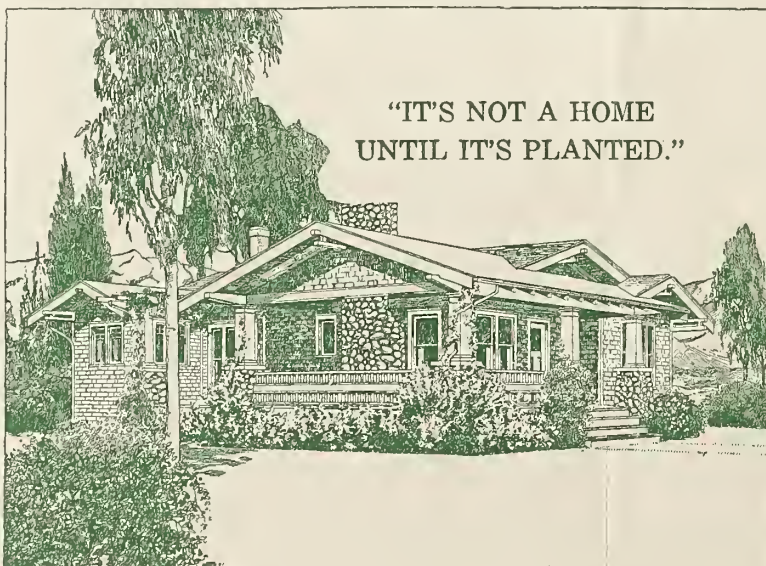

We have spared no time or trouble to select from hundreds of varieties of different fruits the BEST PROVEN varieties capable of enduring our long summer months, our heavy rainfall and our variable winter temperature. It takes time, money and brawn as well as brain to grow good NURSERY stock. We sell mostly to the HOME OWNER directly thereby enabling every home having its ORCHARD. It pays to buy the BEST trees. It costs just as much to set, fertilize and cultivate an inferior tree of a poor variety as it does a strong, thrifty, early bearing productive tree. Imagine the results in the yield of fruits. We all know a good blooded animal—a pure bred—is worth several times as much as a scrub. Why? Because its offsprings or fruits, as it were, are so much more valuable. The same is true with fruit trees. Our trees are strong, vigorous, clean, healthy stock, full of fruit bearing qualities.

MAKE OUT YOUR ORDER NOW—NOT LATER.

According to the old Chinese proverb,

"there is a time for fishing and a time for drying nets." However NOW is the time to make out your order for fruit trees to be sure of getting what you want. Every year waited to set out trees is that many years wasted in fruits. Some stock is going to be scarce.

"IT'S NOT A HOME UNTIL IT'S PLANTED."

Genuine Blightless Pineapple Pears.

BLIGHTLESS PINEAPPLE SAND PEAR TREE.

35 years old, produced in 1922 60 bushels fine fruit which sold on premises for \$1.00 per bushel. The yield and profits from established Sand Pear Orchards of this variety are remarkable.

A few years ago a BLIGHTLESS or BLIGHT RESISTING Pear was discovered. The old parent trees in this section are 42 years old now. They have stood side by side with Keiffer and other varieties which have long ago blighted down. This variety which was named by the Pomological Society two years ago the PINEAPPLE Pear on account of its aroma resembling the Pineapple, has never shown any signs of blight. It has been inoculated with blight germs without contracting the disease farther than immediate contact which soon disappeared.

It is large, rough, firm, cream colored, fine flavor when mellow. It makes the most delicious preserves, marmalades, etc. It is a fine shipper and will keep for months when properly stored. Any fruit tree that bears from 50 to 75 bushels of fine fruit per year is worthy of most serious consideration. Not only bears heavily one year but never misses a crop. This fruit usually sells around \$1.00 to \$1.50 per bushel.

This PINEAPPLE PEAR comes into bear-

ing the third to fourth year after setting out and fifth year bears a profitable crop and increases as the tree grows older. The tree is extremely thrifty, vigorous, free of disease and insect pests, a rapid grower. OUR wood is gotten directly from the old parent trees and are therefore the GENUINE BLIGHTLESS STOCK. They make a beautiful shade tree for the yard, and one or more should be in every Home Orchard.

Commercial Plantings. We think so much of this Pear that we set something like 600 trees in orchard last winter, all making fine growth. Many large plantings are being made over the country and we expect canning factories to spring up and take care of the fruit when the trees come into heavy bearing.

Soil. This PEAR grows well on many characters of soil, light sandy, heavy clay, well drained low lands, and especially well on rich lands.

Distance for setting should not be nearer than 35 feet and as they make an immense spread in time unless kept pruned. 40 feet better.

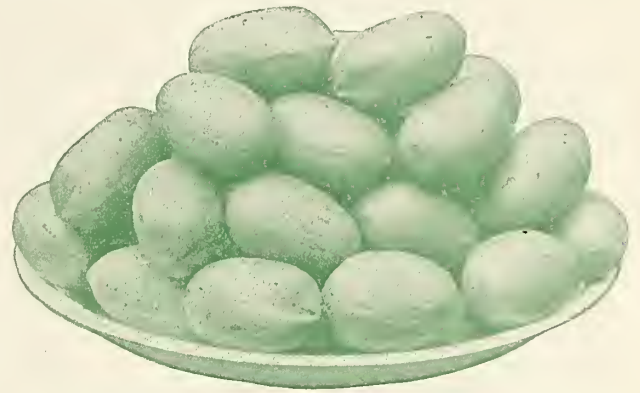

Time of Ripening. From August 15th to October 15th. See Price List.

BARTLETT PEARS

Every home orchard needs this variety Pear as it is so very fine for eating. It is large, yellow, with red blush on sunny side, exceedingly sweet, juicy, aromatic, buttery. Tree comes into bearing about third year after setting out and is a heavy bearer. Ripens in July. See price list.

LARGE SPECIMEN TREES

For quick results buy our large 2 year SPECIMEN trees with heavy fibrous root system, beautiful headed tops and smooth trunk. These trees are now 10 to 15 feet high but will be pruned back for transplanting before shipping. The extra gain in fruit for one year will several times pay the small difference in cost. See Price List.

Pecans

Budded and Grafted Papershell.

Your home orchard should contain one or several Papershell Pecans. In every yard, lot and orchard is a waste place where one or more nut trees could be set and turned into a beautiful and profitable corner. They are very profitable grown on a commercial scale and hundreds and thousands of acres are being set to this wonderful, nutritious fruit which is at home in the cotton belt, where the tree grows to enormous size and productivity. The pecan, together with other raw fruits, are the main ingredients in the well balanced menus. It is used extensively in making salads, cakes and candies, and for this reason always finds a ready market for any surplus nuts one may have. It is rich in nutritive oils that seem to be easily digested by every one. We who live in the "Pecan Belt" should take advantage of our enviable opportunities and set pecan trees.

Stuart. This is the very best, all purpose variety in our experience, being large, averaging about 40 to 50 nuts per pound. Kernel plump, bright, delicious flavor; thin shell. Tree strong, rapid grower, very hardy, bears early and full. Were it necessary to have only one variety I should certainly choose this one.

Success. Owing to the large, ovate size the Success has attracted possibly more attention than any other variety. The kernel is plump, heavy, fine flavor. It is a thin shell and cracks easily. The tree is a good grower and a heavy bearer.

Our trees are budded and grafted on fine heavy roots. Our wood is gotten directly off the best and heaviest bearing trees in the South. There is no better trees to be found than we are offering you. We have nothing but strong, thrifty, vigorous trees with heavy root system that, if properly handled by you, will grow right off into fine heavy bearing nut trees. Every tree we sell is absolutely guaranteed. See Price List.

SATSUMAS

Of the three varieties of Satsuma the Owari is by far the best, most popular and profitable. This variety originated in Japan and has been grown in the U. S. thirty odd years.

THE FRUIT is large, flattened, depressed at both ends, deep orange color, thin smooth rind which may readily be stripped from meat with fingers without breaking the sections. It is called the "kid glove" variety because can be peeled so easily. The fruit is practically seedless, very juicy, of a delicious flavor different from any other orange. It begins to ripen in September, while not very sweet at this stage it makes delightful orangeade and other drinks. Usually ripens fully in October, therefore getting on the market before other varieties of oranges consequently commands a fancy price. The Satsuma is especially adapted to South Mississippi, Alabama, Georgia, Louisiana, Texas and West Florida.

The SATSUMA is the hardiest orange, being worked into the cold resistant Citrus Trifoliata which imparts much of its hardiness to the Satsuma wood, by becoming dormant in the winter months thereby checking tender growth of the Satsuma. The root stock of a 1 year Satsuma tree is 2 to 4 years old before setting out, which accounts to a high degree the early bearing age of the Satsuma tree, which begins to bear the second year after setting out; third year much heavier and the fourth year several hundred fruit, increasing each year as tree gets older. It is reported a tree in Mississippi in 1921 bore 3,800 fruit to maturity. Can you imagine it? Trees bearing 1,000 to 2,000 fruit not uncommon. Satsuma orchards bring handsome dividends, and do it quickly.

IT WAS NOT THE FAULT OF THE SATSUMA that some trees were killed by the very severe cold weather of January, 1924—the coldest we have ever had in this section and probably ever will have again. But it was the fault of the grower not doing his duty.

1. The tree should NOT receive nitrogenous fertilizers after about July 1. In this way prevent late growth of wood.

2. Trees should not be allowed to carry such a heavy crop of fruit—which devitalizes the tree too much.

3. Bank dirt about body of tree two or more feet high and sufficiently thick that it will not freeze through. This will save the tree as high up as you bank well. If terminal branches get killed once in several years they soon come out. Out of 100 orchard trees we will lose only one or two, which probably would not have happened but we had them heavily fertilized in order to get

budwood for our Nursery.

It does not take long to bank trees—one man banked 100 trees for us in less than one-half day.

EVERY HOME ORCHARD should contain at least one-half dozen trees for home use. Plenty orange juice prevents scurvy and other diseases. If a family has to buy the fruit they seldom have as many as they should.

The Satsuma tree is one of the most beautiful, broad-leaved EVERGREEN, and many places in the yard could be used to advantage both for fruit and beauty. Fine for grouping on the lawn, etc.

We have several thousand fine 1 to 2½ feet trees for sale. See price list.

BUY LARGE B. AND B. TREES AND GET FRUIT NEXT YEAR.

We have a few hundred large well-branched 2 and 3 year old trees on 4 year roots, that we offer to our customers who wish immediate results. These trees will be dug with a ball of dirt adhering so that the root system will not be disturbed, therefore the tree should go right on growing without any stunting at all. They should bloom and bear fruit next year, in other words, you gain from 1 to 2 years of growth and fruit.

DISTANCE for setting Satsuma trees. For Home Orchards they might be set 15 to 18 feet. i. e. crowded but for commercial purposes 20 to 25 feet is better, so as to have plenty of room to gather the fruit, etc.

KUMQUATS.

This is one of the most decorative fruits we have, also fine for eating raw, as well as making marmalades, etc. The foliage is rich evergreen and with clusters of the small yellow fruit it puts the finishing touch to the fruit basket. They are as hardy as Satsuma. Our stock is grafted on the hardy Citrus Trifoliata stock.

You would enjoy having one or more trees in your yard. See Price List.

Blueberries

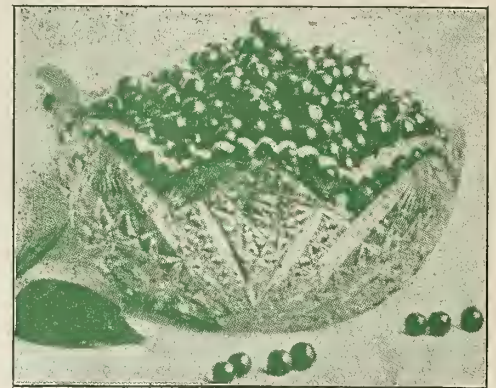

THE RABBIT-EYE CLUSTER BLUEBERRY

About 36 years ago the attention of Mr. M. A. Sapp of Florida was attracted to this variety of blueberry by its superiority as compared to other varieties growing along side in the forest. The thought struck him to transplant a few trees to his garden which he did. These trees bore the second year more fruit and larger than they did in the forest. This led him to set other trees and cultivate them. Seeing they responded he increased his plantings until today he has the oldest and largest BLUEBERRY ORCHARD in the South.

The Blueberry grows well on various soils,

Oldest Blueberry Orchard In The South.

A Bowl of Blueberries.

from light sandy to heavy moist.

It thrives in the sections where the old time Huckleberry grows, but does not grow on lime soils. The tree grows rapidly and comes into bearing generally second year after setting out, producing about one quart, third, 3 quarts per tree, increasing until a ten year tree produces something like 35 to 50 quarts. The tree is unusually healthy, no disease or insect pest found to disturb them. No spraying being required. Orchard is easily cultivated and berries are easily picked from tree which grows to be about 10 feet high with about same spread. A person can pick about 30 to 50 quarts per day. The berry is large, from ¼ to ½-in. in diameter; blue black, tender skin, few small seed, flesh juicy and delicious. Most everyone knows how good huckleberries are but the Blueberry is much better and larger. Nothing is better than blueberries with sugar and cream unless it is blueberry pie topped with ice cream or blueberry pie A LA MODE—if you please. There is no limit to the market for this berry. They sold at the orchard this season for 30c to 40c per quart. They ship remarkably well without refrigeration. Distance for setting trees should be 15 to 18 feet for commercial plantings which requires about 193 trees per acre. For HOME ORCHARDS they may be grouped like spirea or other ornamentals and used to beautify the grounds. They are a very pretty shrub besides furnishing the fruit.

We have several thousand trees and urge you to set a few in your Home Orchard at least. See Price List.

SCUPPERNONG.

Thomas. Very thrifty vine, prolific, fruit reddish purple, grows in clusters, very sweet and juicy. Said to be the best scuppernong on the market. Ripens in August.

White. This is a fine berry especially for home use. The fruit is large, sweet and very juicy. Ripens in August. See Price List.

NECTARINE

Wouldn't you like to have an old time Nectarine in your orchard? As you remember, they are very much like a peach except have no fuzz and have a distinct flavor all its own. Try a couple of trees. Set tree on West or North side of house to prevent frost injury. See Price List.

PLUMS

Cluster of Red June Plums.

This is a fruit everyone could have and should have as they are so easily grown, bear so early and so heavy, fine for eating raw and for canning. For the past few years they have brought fancy prices on local market here, from 10c to 25c per dozen. Single trees this season bore several bushels of fine fruit. Canning factories were eager for all surplus fruit, at attractive prices. Our trees are grown on plum stock, choice, thrifty trees.

Large Red June is no doubt the best Plum for all purposes. Fruit big, juicy, sweet, flesh light lemon yellow, firm, cling to half cling, small pit. Fruit cordate and very prominently elongated at apex; suture deep, deep red all over with handsome bloom. Very showy. Tree extremely productive and vigorous. Don't fail to include several in your order. See Price List.

APRICOTS

Moorpark is one of the largest and finest Apricots, yellow with red cheek; flesh rather firm, orange, parting from the stone; sweet juicy and rich with a luscious flavor. Ripens in July. See Price List.

PERSIMMONS

TANE-NASHI—JAPANESE PERSIMMON

This variety we prefer to all others. It is beautiful, pointed, very smooth skin, light yellow changing to bright red when fully ripe, flesh yellow, seedless and of first quality. Vigorous, prolific. See Price List.

APPLES

"In the Shade of the Old Apple Tree."

Don't you remember the fine big red and yellow apples of the old home place? Somehow for the past few years we have depended upon the northern and western grown apples, when we can and do have fine apples right here at home. The old orchards have been neglected and we have failed to set new ones. It is not necessary to have many varieties of apples in order to have all the fruit one needs for home use. Like peaches the orchard should contain varieties which ripen in succession all during season. Be sure to set a few trees this winter.

Early Harvest. This is one of the earliest varieties beginning to ripen in June. It is round, yellow, flesh white, tender, juicy, crisp with a rich sub-acid flavor. Tree very prolific and hardy.

Red June. This is the other early apple

best for home. It is a rich red, round, fine flavor. Ripens in June. A beautiful sight in June when loaded with red apples.

Horse. Everyone knows this variety. Large, yellow flesh, coarse, subacid. Fine for cooking. Very popular in the South. Fine for storing and mellowing. You will need one or more trees of this variety.

Delicious. A very popular variety for fall and early winter use. Fruit large, brilliant dark red, flesh fine grained, crisp, melting, juicy, with a delightful aroma. Very high quality. Fine keeper and shipper.

Stayman's Winesap. Large, bright red, fine, juicy, extremely productive. Tree vigorous grower, adapting itself to different soils. Ripens in Fall. One of the best varieties.

Our Tree are the finest we ever saw. They are grafted, grown on new ground, and have a heavy root system. See Price List.

FIGS

Let's not forget to find a few vacant places in the Home Orchard for that wonderful fruit, the Celestial Fig, which every one likes both raw and preserved. Trees do best in corners about the house and grounds where the roots will not be broken. We grow the small blue fig because it is best and hardiest. See Price List.

GRAPES

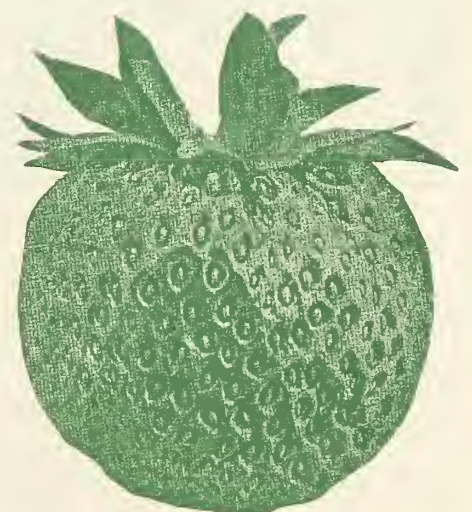

The grape vine when properly trained makes a beautiful covering for trellis and is an ornament in any yard. It is very hardy, comes into bearing early usually second year, requires little space and yields a heavy crop of delicious fruit practically never missing a crop. Grape juice is easily and quickly made at home, is one of the most cooling, thirst quenching drinks.

Niagara. This is the very popular and profitable early grape. It is white or cream colored when full ripe, large, full clusters, large fruit, sweet, juicy. The two year vines in our nursery bore as many as 22 large full bunches this past season, in fact, at the time of bearing they were only 17 months old. Vines are vigorous, rapid growers. You will never regret setting several.

Concord. The Concord ripens a few days later than the Niagara. It is the well known bluish purple or black grape. Used very extensively for market purposes. Bunches large and compact; berries large, round, juicy, sweet, aromatic. Vines vigorous, rapid grower. Juices, jellies etc., made from it has that rich purple color.

Grapes do best on well drained soil, and a warm sunny exposure, although they will grow and fruit well on most any soil. They should be set about 8 feet apart. Keep well fertilized and cultivated. See Price List.

STRAWBERRY

Klondike. This berry is grown most extensively of all strawberries, both for home and market purposes. It is a large, dark red berry, fine shipper being firm, fine flavor. 100 to 200 plants enough for family garden. See Price List.

PEACHES

Peaches are at home on the clay subsoil of the South. Our climate is ideal for peach growing and many large commercial orchards are being set. For family use by setting two or more varieties which ripen in succession we have peaches from about May 20th through the summer months to middle of September. No one except those who have tried it knows how fine it is to have fresh ripe peaches directly from the tree any time you want to eat them.

We grow the best varieties only. We have both the June buds and 2-year trees. Tree should be set about 18 feet apart.

Early Rose. This is one of the earliest varieties. Fine, large, juicy, red blush, very hardy. Early to bear and last to bloom. Prolific, extra fine.

Mayflower. This is the other early variety we grow and have found to be very fine. By having early fruit, if one has a surplus, you can always get a fancy price for it. It is beautiful red, large, juicy.

Carmen. One of the best varieties that grows. It is the second variety to ripen. Large, round, flesh white, skin yellow with red blush, sweet, juicy. None better.

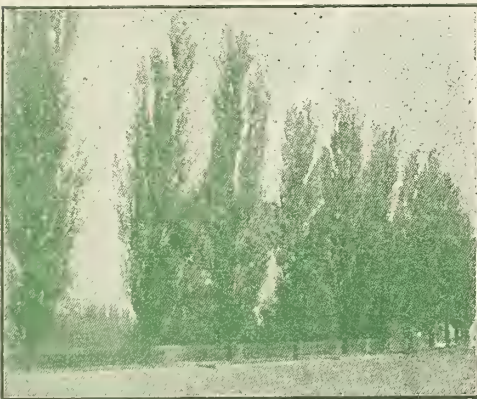

J. H. Hale. Very popular, ripens after Carmen; large, golden yellow skin, deep yellow flesh, red blush fine and sweet. Tree very hardy and prolific.

Hiley Belle. This variety ripens also right after Carmen. It is a very fine variety. Rich, creamy white with fine blush, firm, excellent, free.

Elberta. A well known variety, large yellow, red cheek, firm, fine for eating, preserving or shipping. Leading market variety. Freestone.

September Cling. Some people like a late peach. This is the best late variety, large white with red cheek, fine flavor cling. Heavy bearer.

It is a good idea to set a few trees every year or two, in this way we have new trees coming on all the time. See Price List.

LOMBARDY POPLAR

This is one of the finest trees for sky line and therefore used so much in the best planned Home Grounds. Some landscape gardeners claim it is their salvation because there is no other tree that adds so much. Its foliage is rich, glistening in the sunlight and wind, a mingling of reddish brown on beautiful green leaf. Extremely rapid grower, tall, stately, holding its branches close and upright. We offer only the choicest trim trees. Heavy root system. See Price List.

NEW CHINESE LOMBARDY POPLAR

Growth and foliage similar to the Lombardy except the leaf is more heart shaped and is a darker green. It is a very pretty tree. Exceedingly stately and upright. See Price List.

SILVER POPLAR

Because so many customers admire the beautiful Silver Poplar we decided to grow some for sale, consequently have several hundred choice trees. They grow rapidly, make a fine shade tree for lawn, street or any place where a rapid growing shade is desired. The top leaves are a rich green and the underside is a velvety silver color. They are very attractive when the least bit of wind is blowing with the two colors dazzling in the sunlight.

UMBRELLA CHINA TREES

We have a beautiful lot of fine 1-year straight genuine China Trees. They are from 4 to 6 feet high and are perfect specimens. See Price List.

A service can be rendered by telling your friends of our Nursery, and if convenient, show them this catalog which will be appreciated by us.

PALMS

The Palm lends charm and dignity to the Home Grounds that at once stamp the owner in the eyes of the public as being a lover of the best in ornamentals. The stately Palm gives such a tropical air to a home, especially if combined with orange trees.

The above photograph is of a Sabal Palm and we have several hundred young plants which we will put on sale this season. We have some very choice plants of the Phoenix or Date Palm. It is a broad spreading tree with long date-like leaves. Some people think this the prettiest variety. Plants are now about 1 to 2 feet high. They will be dug with ball of dirt and burlapped. Fine for tub. Price \$1.00 each.

"We pass this way but once. Let us beautify the path as we go, so that the world may see which way we went."

MOCK ORANGE—Syringa Coronarius

One of the best loved of all the old-fashioned shrubs—"Sweet Syringa." Very fragrant, pure white blossoms of large size; attractive yellow stamens. Grandiflora is a taller growing variety, with larger flowers. One of the best and most useful shrubs for high foundations, screens, tall hedges, and borders. Height, 6 to 10 ft. Vigorous, fast grower. 2 to 3 feet 35c each; 4 for \$1.00.

DEUTZIA PRIDE OF ROCHESTER

Double white, back of petals faintly tinted with pink; large panicles; blooms middle of April and continues to bloom three or four weeks. Price 2 to 3 feet 35c; 4 for \$1.00.

AMoor RIVER PRIVET SOUTH

The best hedge for southern plantings, practically evergreen. Get our prices before ordering.

SNOWBERRY

White Snowberry. The pure, white berries of this ornamental shrub are well known to all. Plant in groups for the best results.

Red Snowberry. In late autumn this plant is well fruited with clusters of small red berries. Very ornamental. A graceful, pendulous plant in habit. 2 to 3 feet, 35c; 4 for \$1.00.

HYDRANGEA ARBORESCENS

"Hills of Snow."

Flowers are very similar to the old-fashioned Snowball. Valuable for its season of bloom, just after the spring-flowering shrubs. Does well in shade, thriving in an eastern or northern exposure. Prices 35c each; 4 for \$1.00.

SPIREA VAN-HOUTTEI

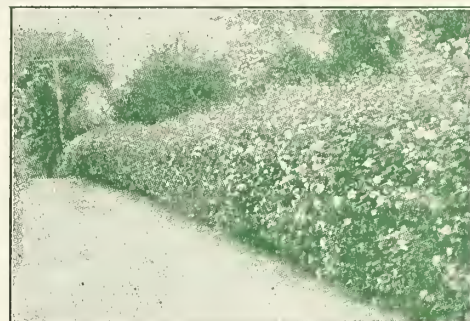

While this is the best known and most generally planted of all shrubs, we still believe it to be of the most valuable, and certainly one of the most beautiful. Its remarkable adaptability to any soil or situation, quick growth, its fine foliage and graceful habit, aside from its beauty as a flowering shrub, all combine to make it a great favorite. This Spirea with its curving branches outlined by myriads of tiny bloom forms one of the chief characteristics of our springtime landscape. Strong 2 to 3 feet plants, 35c each; 4 for \$1.00.

WEIGELA ROSEA—PINK WEIGELA

A strong growing shrub of graceful habit, and handsome foliage. Blooms in late May, and the pink, trumpet-shaped flowers are produced in such profusion as to nearly hide the leaves. Good for foundation planting; about the same height as Spirea VanHouttei. Price, 2 to 3 feet, 35c each; 4 for \$1.00.

ABELIA GRANDIFLORA

A most useful and beautiful broad-leaved shrub. The graceful drooping stems are covered with dark glossy leaves which assume a metallic sheen in winter. From May until frost stems are loaded with small white flowers. Fine for single plants or grouping. Price, 12 to 18 inch plants, 50c each.

Beautiful Hedge of Althea-(Hybiscus).

There is not a more useful and beautiful ornamental shrub than the ALTHEA. It blooms constantly from early spring until late fall. It demands very little attention and endures the dry hot summer. Be sure to include one or more in your order of plants. A hedge of ALTHEA is a mass of blooms. It may be sheared.

Amplissima-double dark red. Jeanne of Arc-double white, 2 to 3 feet, 35c each; 4 for \$1.00.

HYDRANGEA PANICULATA

Bears gigantic panicles of white flowers in mid-summer that are almost ever-lasting; with age, the blooms take on a pink shade, can be dried and kept in the house indefinitely. One of the best shrubs but especially valuable because the blooming season is throughout the summer and fall after most shrubs are bare of bloom. 18 to 24 inches, 35c each; 4 for \$1.00.

Wisteria

CHINESE BLUE

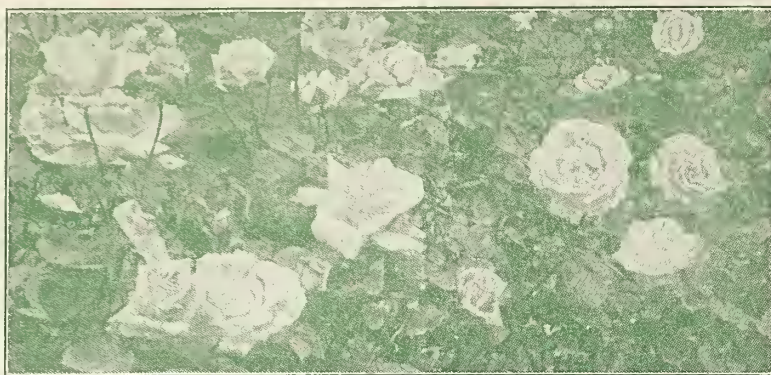

Very fast grower, drooping clusters of beautiful blue flowers. 2-year vines, 2 to 3 feet, 35 cents each; 4 for \$1.00.

LAGERSTROEMIA INDICA.

(Crepe Myrtle.)

A very popular and free flowering shrub, or small tree, which produces blooms in great abundance throughout the summer. The flowers are beautifully fringed and are borne in large clumps. A massing of these, or a single specimen, makes a most striking effect. Commences to bloom in May. Price, 2 to 3 feet, 50c.

ROSES

Every home needs a few Rose Bushes. We offer only the best varieties.

American Beauty—Brilliant Red.

Mamon Cochet—White.

Paul Neyron—Brilliant Rose.

Cherokee—White with cream stamen.

Crimson Rambler, Yellow Rambler.

Price, No. 1, 50c each.

THUNBERGII

(Thunberg's Barberry)

It is a native of China, but was introduced from Japan. It forms a compact bush 3 to 4 feet high, with neat little leaves that change to rich scarlet in autumn. The abundance of bright red fruit is exceedingly attractive. It bears shearing well and makes a dense hedge. Price, 2 to 3 ft., 25c; 5 for \$1.00.

GOLDEN BELL—FORSYTHIA

Like golden glints of sunshine the clustered yellow flowers of the Golden Bell burst forth and announce the coming of Spring. Long before the leaves appear, the green branches become studded with the bright blossoms. We need the enlivening effect of this fine old shrub in our rather bleak early-spring landscape. Price, 35c each, 4 for \$1.00.

Terms and Conditions of Sale.

We Will Send Instructions for Setting, Fertilizing and Cultivating With Each Order For Trees.

Our Trees Will Be Pruned—Ready To Set Out. Because trees grow off faster and live better if properly top and root pruned. Especially do Satsumas and all the taller trees like peaches, pears, plums, apples need to be properly trimmed which not only insures them living but they make a proper headed tree, and will within a year or two be larger than a tree not pruned. It is almost impossible to get a customer to cut his trees back—naturally he wants them to be as big as possible.

Our Prices are made out on the height of the tree when dug. When properly topped and trimmed the height is materially reduced. Therefore, if the height of tree when received is less than catalog height this is the explanation.

Guarantee. We guarantee our trees to be well grown, properly handled, packed and shipped according to instructions. Our liability under the foregoing guarantee is limited in amount to the original price received.

Claims. If by any possibility errors should occur, they will be promptly

rectified, if claim is made within ten days after receipt of trees.

Terms. Our terms are cash with order when shipment is to be made at once. If order is sent in before shipping season, 25 per cent of purchase price may be sent with order, trees will be held for you until you wish them shipped, at which time balance of purchase price should be sent.

How To Send Money. Send money any way that is convenient to you.

Our Shipping Facilities are exceptionally good, being convenient to the N. O. & N. E. and the G. & S. I. R. R. We have local and long distance telephone and telegraph service.

Substitution. If out of the varieties ordered we will send the ones we know to be equal or superior unless instructed not to substitute.

Order Early. The demand for our high grade fruit trees will far exceed the supply and for this reason we urge you to send in your order early if you want to be sure of getting them.

No Extra Charge For Packing or Drayage. Our trees are carefully tagged, tied, roots packed in damp moss and wrapped, free of charge.

Our Trees Free of Disease. A certificate of inspection of the Mississippi State Entomologist guaranteeing our trees to be free of disease accompanies each bundle of trees. All inspection laws of other states are complied with.
